

Multiantenna Channels: Capacity Coding and Signal Processing : Dimacs Workshop Signal Processing for Wireless Transmission, October 7-9, 2002 : Dimacs ... Mathematics and Theoretical Computer Science)

This volume is a collection of papers from the DIMACS Workshop on Signal Processing for Wireless Transmission. The workshop brought together theoreticians and practitioners working on wireless communications, information, and coding theory from a variety of perspectives. The main topics discussed in the book are capacity of multiantenna channels, vector broadcast channels and dirty-paper coding, signal processing, and ad hoc networking in wide band channels. These are all major themes in current research in physical-layer design for wireless communication. The book is suitable for graduate students and researchers interested in mathematical problems of communication theory.
